

Technology Work Session for the South African Army; Hosted by the CSIR

Communications EW

Communications and Signal Intelligence in the Battle space

Christo Cloete

CSIR Defence, Peace, Safety and Security

19 April 2012

CSIR

our future through science

Outline of presentation

- Introduction
- Environment
- Communications Intelligence
- Communications Jamming
- Conclusion

Electronic Warfare Concept

Electronic Warfare (EW)

Any action that allow
**Control of the
Electromagnetic
Spectrum**

Electronic Attack (EA)

Use of electromagnetic energy, directed energy, or anti-radiation weapons to **attack personnel, facilities, or equipment** with the intent of degrading, neutralizing, or destroying enemy combat capability and is a form of fires.

Previously ECM

Non -
Destructive
• Jamming
• DEW

Destructive
• ARMs
• DEW
• EMP

Threat
Warning

Actions tasked by, or under direct control of, an operational commander to **search for, intercept, identify, and locate sources of intentional and unintentional radiated electromagnetic energy** for immediate threat recognition, targeting, planning, and conduct of future operations in support of EW operations and other tactical actions.

Previously ESM

EA
Control

Direction
Finding

Electronic Protection (EP)

Passive and active means taken to **protect personnel, facilities, and equipment** from any effects of friendly or enemy employment of EW that degrade, neutralize, or destroy friendly combat capability.

Previously ECCM

Spectrum
Management

EW
Hardening

Emission
Control

SIGINT (Signal Intelligence)

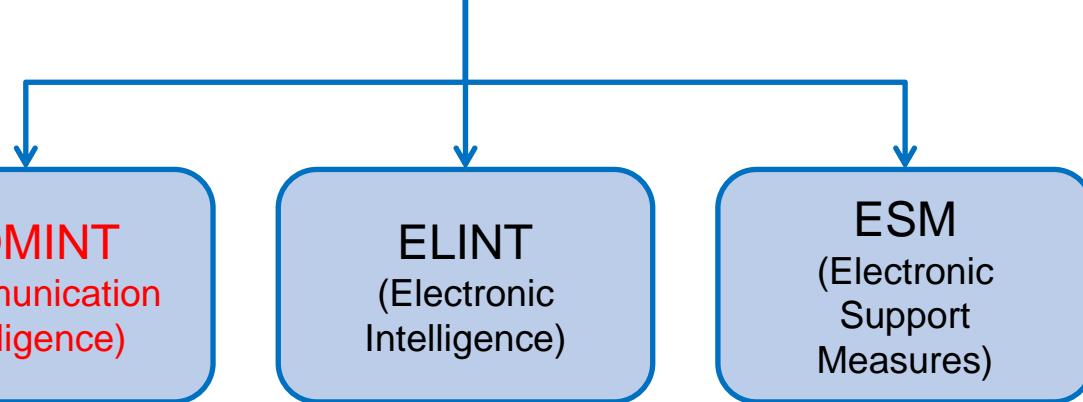

COMINT
(Communication
Intelligence)

ELINT
(Electronic
Intelligence)

ESM
(Electronic
Support
Measures)

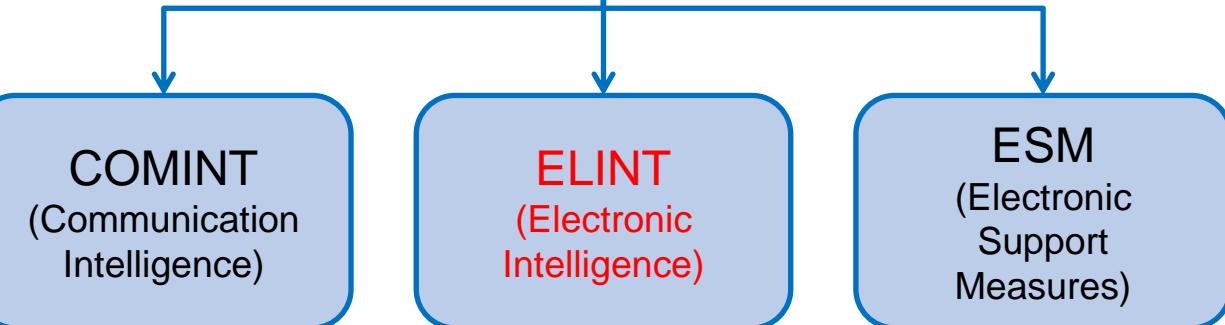

- **SIGINT** is intelligence-gathering by interception of signals

SIGINT (Signal Intelligence)

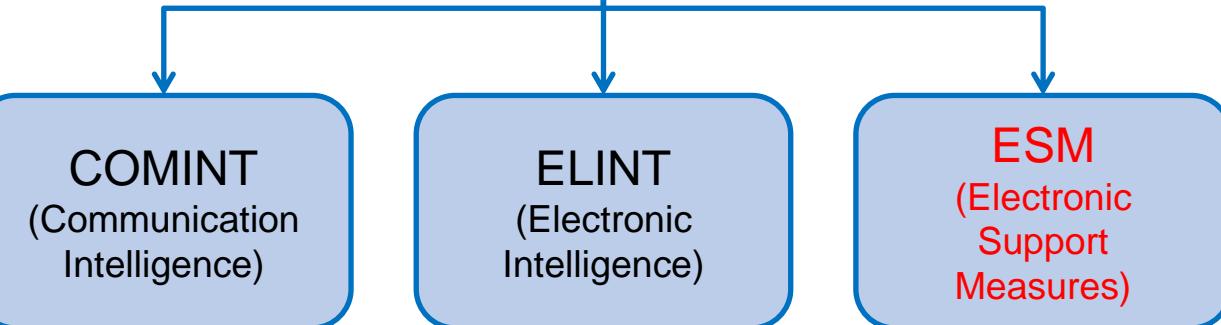

- **SIGINT** is intelligence-gathering by interception of signals
- **COMINT** deals with technical information as well as messages or voice information (translation) derived from the interception of communications. Includes traffic analysis - the study of who is signalling whom and in what quantity. Decryption falls outside the scope of COMINT

SIGINT (Signal Intelligence)

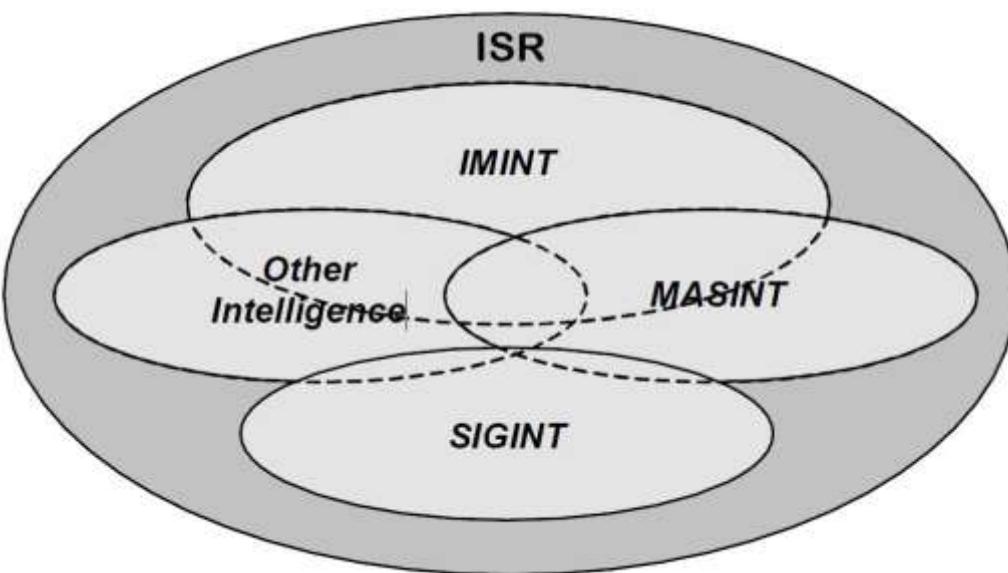

- **SIGINT** is intelligence-gathering by interception of signals
- **COMINT** deals with technical information as well as messages or voice information (translation) derived from the interception of communications. Includes traffic analysis - the study of who is signalling whom and in what quantity. Decryption falls outside the scope of COMINT
- **ELINT** refers to intelligence-gathering by use of electronic sensors. Its primary focus lies on non-communications signals intelligence. ELINT is normally seen as a non-time critical gathering of data – more strategic in nature. The data can be captured and analyzed off-line

SIGINT (Signal Intelligence)

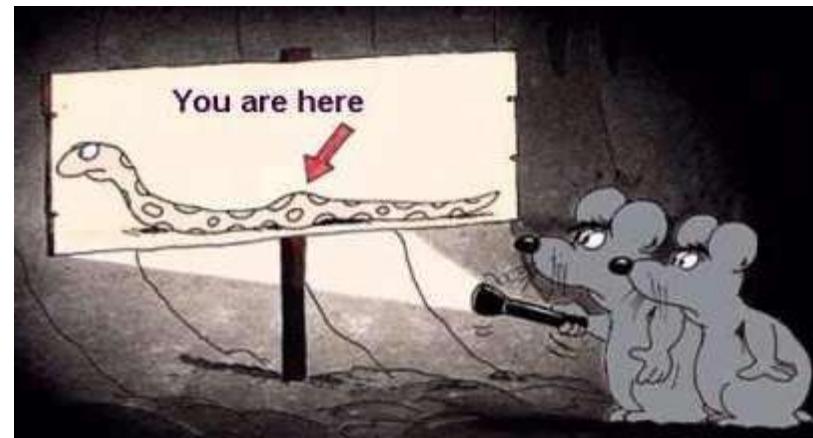

- **SIGINT** is intelligence-gathering by interception of signals
- **COMINT** deals with technical information as well as messages or voice information (translation) derived from the interception of communications. Includes traffic analysis - the study of who is signalling whom and in what quantity. Decryption falls outside the scope of COMINT
- **ELINT** refers to intelligence-gathering by use of electronic sensors. Its primary focus lies on non-communications signals intelligence. ELINT is normally seen as a non-time critical gathering of data – more strategic in nature. The data can be captured and analyzed off-line
- **ESM** deals with time critical data - warnings and EA system control

SIGINT

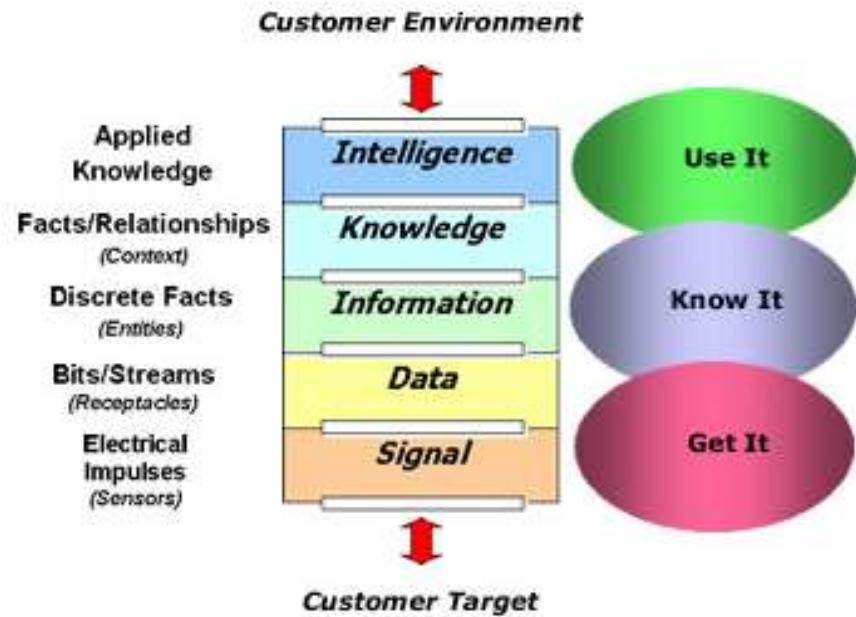

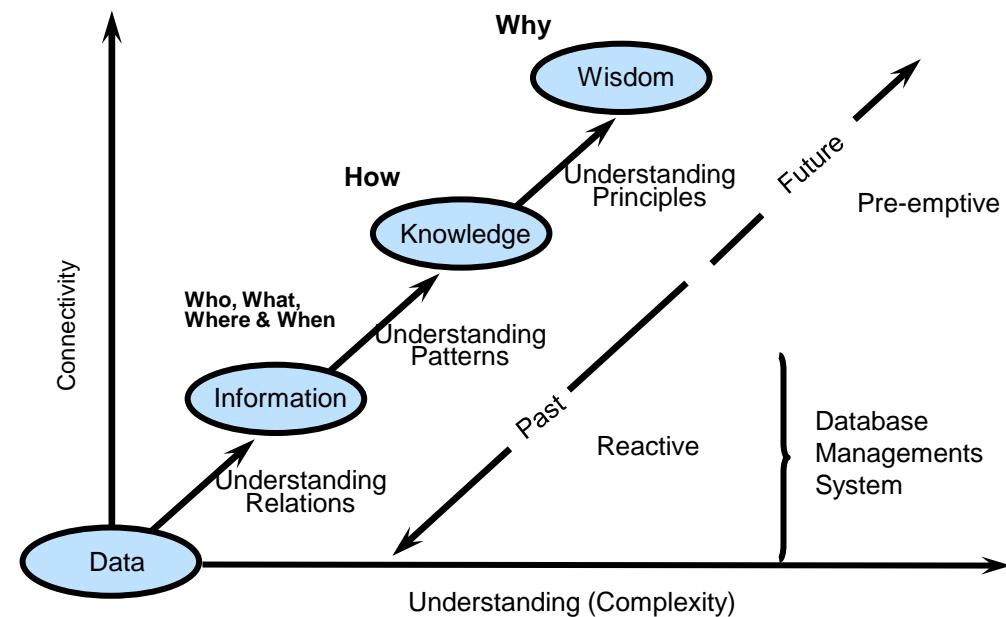

Operational environment

- Advantages of SIGINT:
 - Passive - no active transmissions
 - Enemy's Organizational structure, EOB and Intent can be obtained
 - Equipment capability can be learned (e.g. frequency range, power, etc.)
 - Can sometimes reveal specific information on enemy equipment (SEI)
 - Emitter location can be approximated and targeting support (kinetic and non-kinetic) delivered
 - Provide Indications and Warnings (e.g. GNSS jamming)
 - Can cue other systems (jammers, EO systems, radars etc.)
 - Support Battle Damage Assessment (BDA)
 - Support Tasking and Mission Planning

SIGINT ...

- Limitations of SIGINT:
 - Requires active transmissions
 - Data may be denied (e.g. secure communications or denial jamming)
 - False information may be passed by the enemy – deception
 - Dense environment - too much data - Probability Of Intercept (POI)
 - Collection subject to atmospheric conditions (Probability Of Detection)
 - Locations derived from SIGINT may be imprecise
 - Quality of emitter Identification and Attack efficiency is directly linked to quality of EW Information System (database)

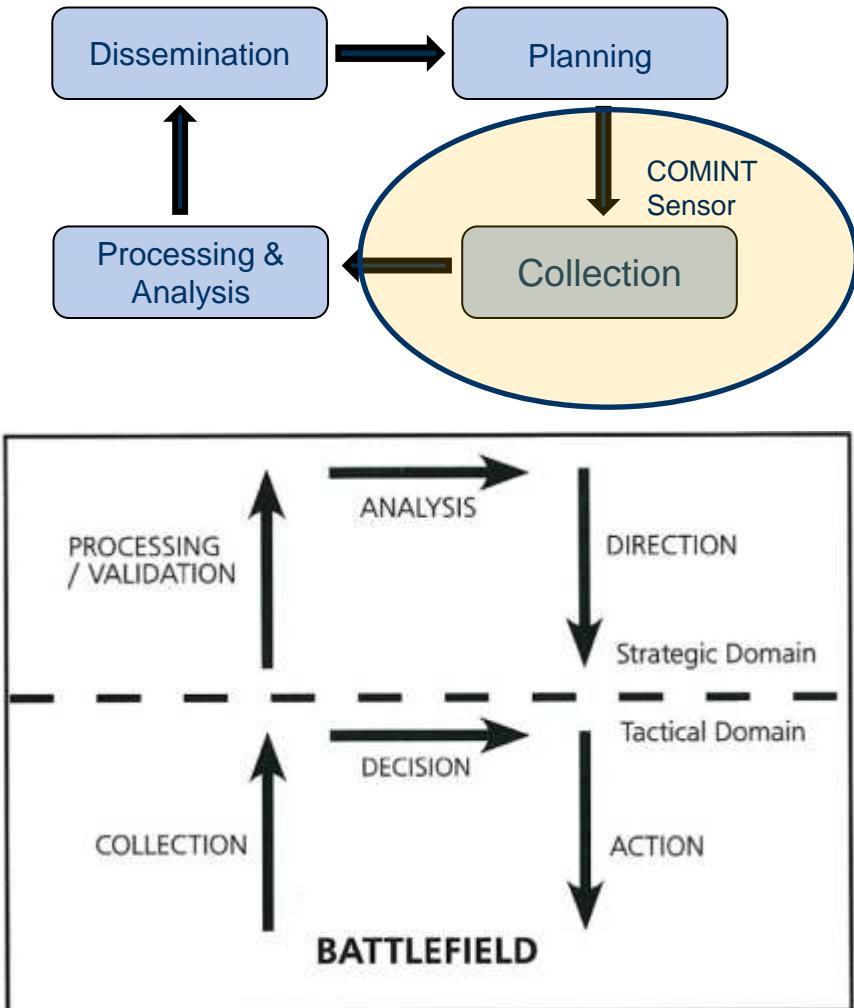

Environment

- Communications extends from 100 kHz to 300 GHz and the visible and IR part of the EMS
- Commercial communications rapid growth
- Communication signals are interleaved/shared with other EMS users:
 - Navigation, data-links, radars, proximity fuses, etc.
- Very dense EM environments - number of signals that can be intercepted, analysed & stored grows exponentially as a function of altitude
- SIGINT systems may be Surface-based, Airborne or Space-based
- EM Propagation:
 - Obscuration (LOS)
 - Attenuation (receiver sensitivity)
 - Signal delay (time/frequency hopping & jamming)
 - Satellite revisit time (POI)

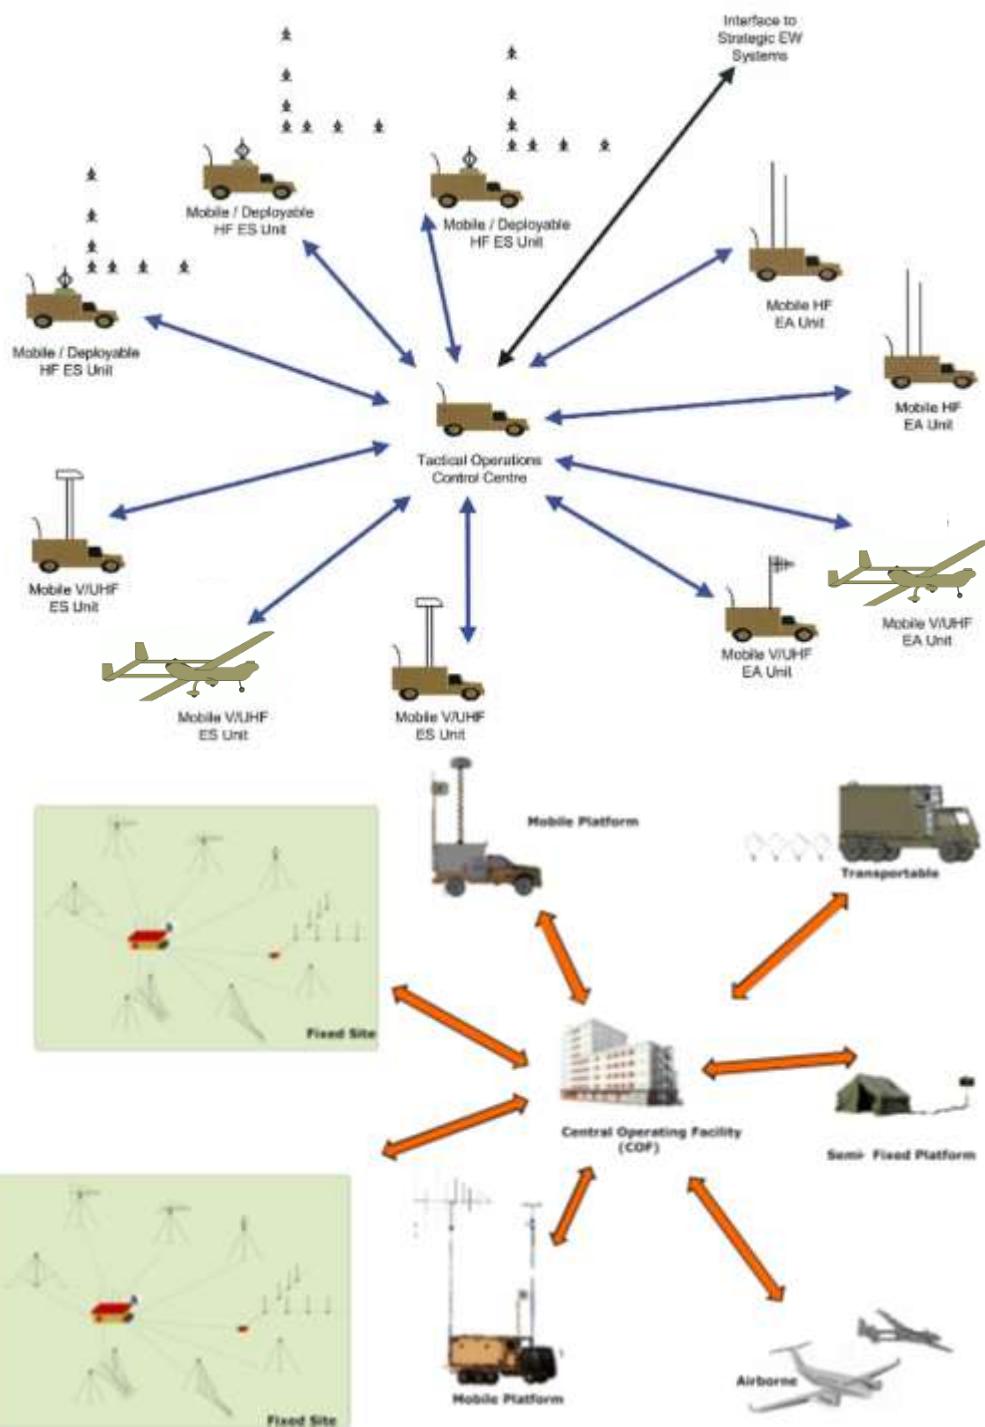

COMINT

- COMINT Sensor Functions:
 - Detection, Location, Discrimination, Classification, Demodulation & Decoding
- COMINT System Functions:
 - Decryption, Extraction, Transcription & Dissemination
- Distinction between COMINT & ELINT blurred - communications can be:
 - Analog or Digital,
 - Voice, Message or Data,
 - Between People or Computers
- Communications is becoming less COMINT-friendly - encryption
- Intelligence Cycle
 - Strategic Intelligence cycle
 - Tactical/Strategic Intelligence cycle

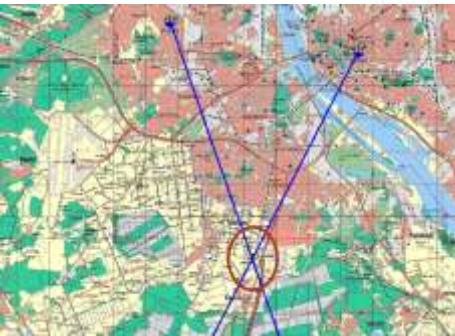

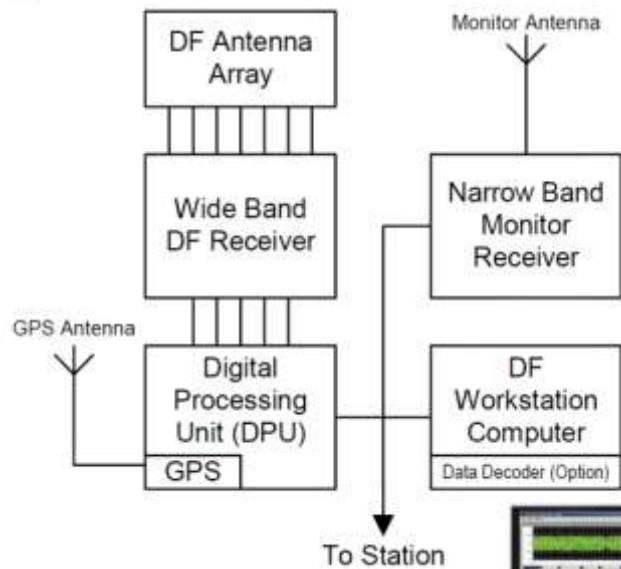

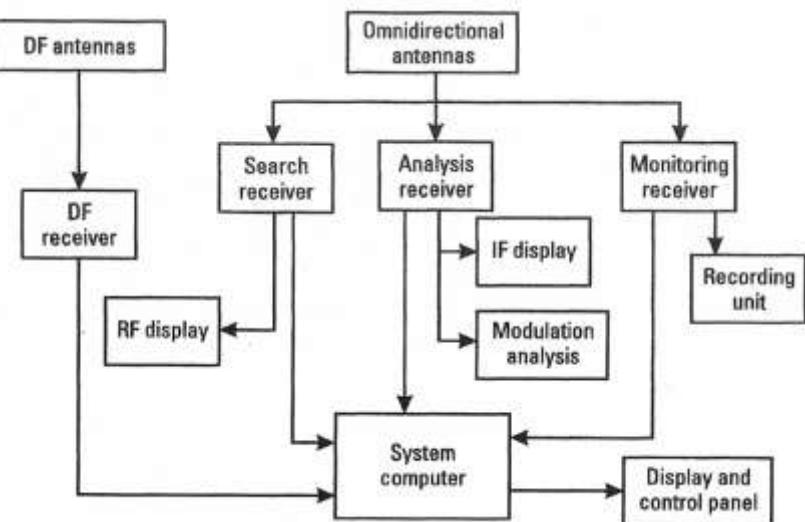

Tactical vs. Strategic COMINT

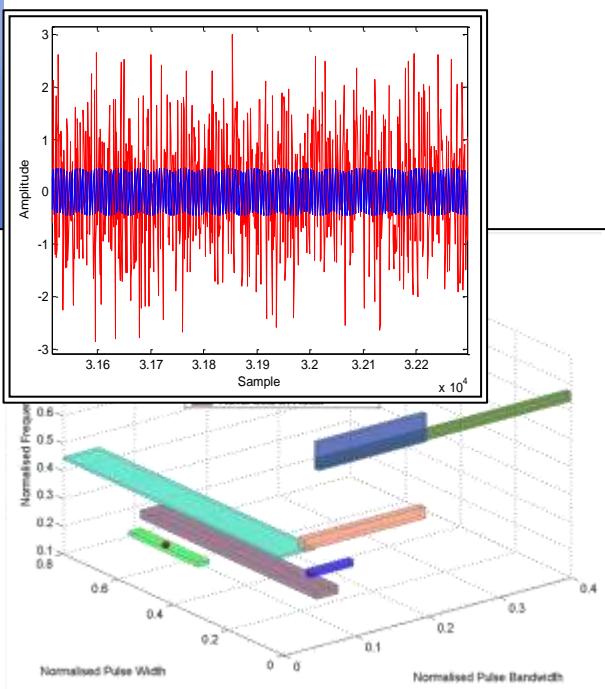

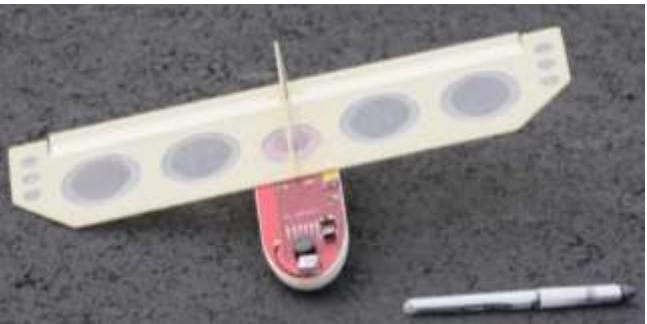

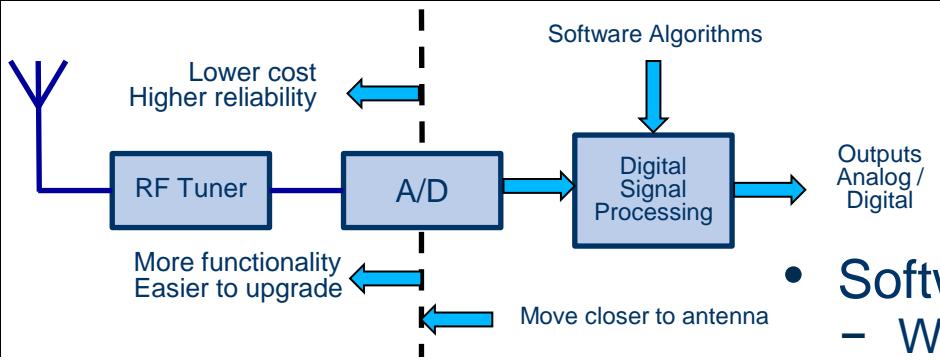

- **Tactical**
 - Support the battlefield commander in his tactical decision making through the collection of enemy communications information
 - Deny the enemy the utilization of the EMS for communications
 - Supply intercepted information to the strategic domain for further processing, validation, analysis and decision making
- **Strategic**
 - Typical integrated Strategic COMINT System
- **Strategic jamming**
 - HF and selected satellite communications only

COMINT Systems

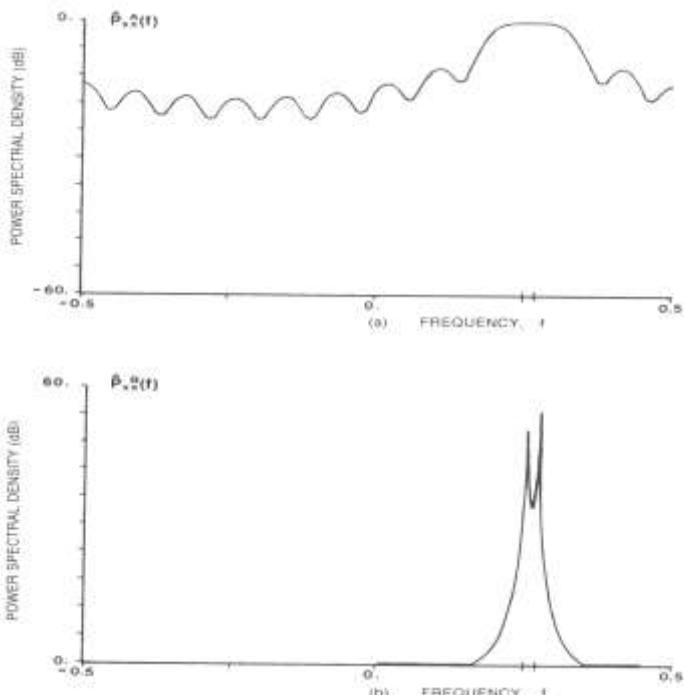

- Previous generation COMINT system
- Current generation COMINT system

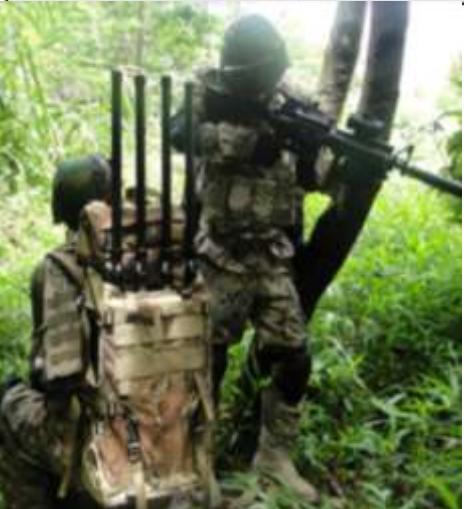

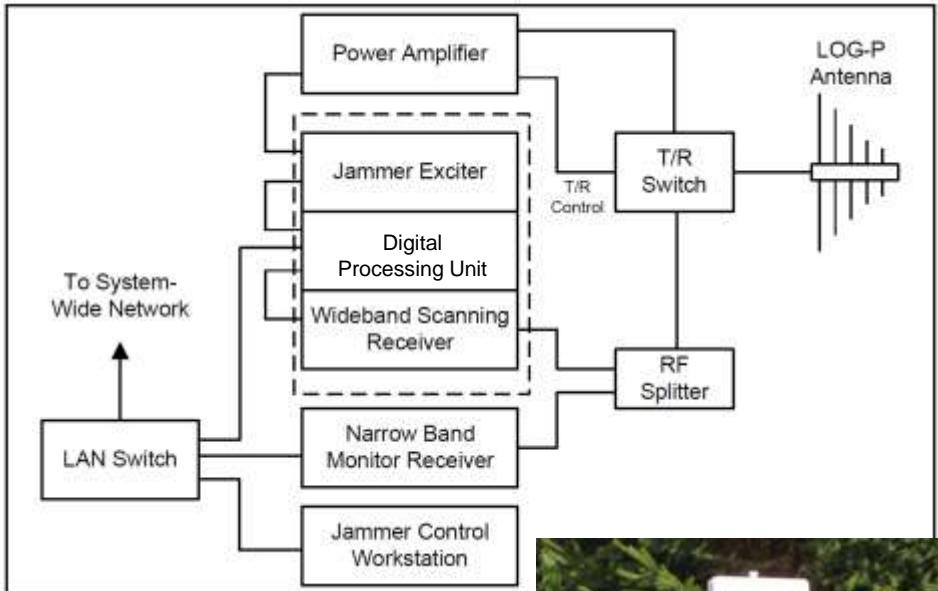

COMINT Trends

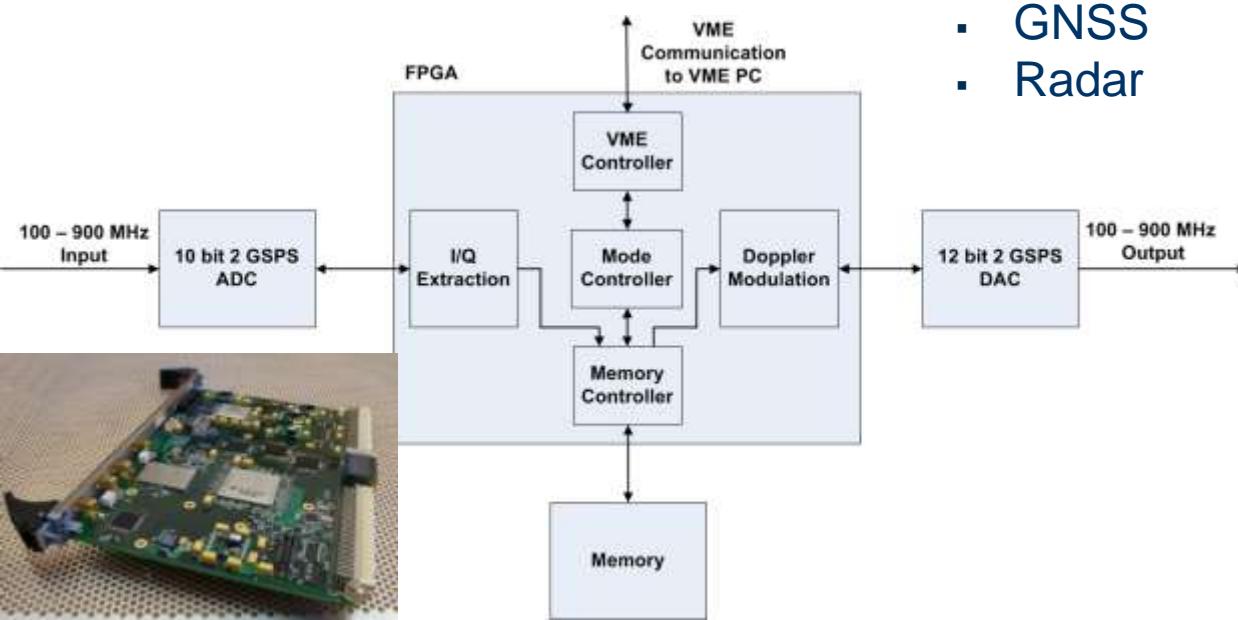

- Software Defined Receiver (SDR)
 - Weak Signal Detection & Parameter Estimation
 - Specific Emitter Identification (SEI)
 - Super Resolution Direction Finding (DF)
 - Statistical Classification
 - Compressive Sensing
- Optimization (Search, Parameter Estimation)
- Unmanned Aerial Vehicles (UAV)

Current Generation Communication Jammers

Jammer Trends

- Active Electronic Steered Antenna (AESAs)
- Unmanned Aerial Vehicles (UAV)
 - Electronic Attack (EA)
 - Battle Damage Assessment (ISR)
- Digital Radio Frequency Memory (DRFM)
 - Inherent ESM capability – low latency
 - Techniques (Denial & Deception)
 - Analogue
 - Data-links
 - GNSS
 - Radar
- Optimization
 - Jamming Techniques
 - Look-through
 - Mission

Conclusion

- Communications EW requirements must be driven by the actual operational needs and missions
- The dynamic commercial communications market and infrastructure will remain the largest single driving force behind the development of new COMINT and Communications Attack equipment
- EW Information Systems is essential for interoperability, Battle Management and EM spectral planning
- As you can exploit the EMS, so can and will the enemy
- If the emission is detected, it can be jammed or deceived
- It is essential to plan in the Electronic Protection measures (equipment, antennas, waveforms, placement and doctrine) in the development and specification of communications networks - not retrofit
- Spare stored (Faraday cage) communications only guaranteed protection against EMP & HPM attacks
- Need EW knowledgeable people

Thank You
